PROFESSIONAL SUMMARY

Computer Engineering student with hands-on frontend development experience from an internship at DHOONDH, where I contributed to four websites (three live) and one live application. Skilled in C, C++, Python, HTML, CSS and JavaScript, with practical projects in document-based question answering and spam email classification. Seeking an entry-level role in frontend, web or software development to build practical, user-focused solutions.

EDUCATION

Vadodara Institute of Engineering	Computer Engineering (Pursuing)	**CGPA: 7.93**
Kendriya Vidyalaya AFS No. 3	Class XII | 2023	**62.8%**
Kendriya Vidyalaya AFS No. 3	Class X | 2021	**79%**

TECHNICAL SKILLS

Programming Languages: C, C++, Python, JavaScript
Frontend Development: HTML, CSS, JavaScript, Bootstrap
Mobile App Development: Flutter
Design & Development Tools: Figma, Lovable

INTERNSHIP EXPERIENCE

Frontend Developer Intern | DHOONDH — 15 Days

- **Website 1 – Recruitment Company Website (Live):** Business website introducing a recruitment company and its services to job seekers and employers. Developed the frontend and UI.
- **Website 2 – Marketing Company Website (Live):** Business website presenting a marketing company and its services to prospective clients. Built the frontend and implemented the UI.
- **Website 3 – Mechanical Company Website (Live):** Business website showcasing a mechanical company and its services to customers. Created the frontend and user interface.
- **Website 4 – Advisory Firm Website:** Business website presenting an advisory firm and its services to prospective clients. Developed the frontend and UI.
- **Application – Rental Items App (Live):** Contributed to the frontend of an app for renting items.
- **Tools Used:** Figma, Lovable, Bootstrap, HTML, CSS, JavaScript (websites); Flutter (application).

ATL Intern — 2 Months

- Visited schools and reviewed real-life projects developed by school students.
- Evaluated student projects by identifying their advantages, disadvantages and practical applications.
- Guided students on improvements to project functionality, design and effectiveness.
- Gave constructive feedback to help students refine ideas and develop better real-world solutions.

PROJECTS

RAG Document Q&A Bot

Tech Stack: Python, Streamlit, LangChain, Sentence Transformers, PyPDF, Google Gemini API

- Built a Retrieval-Augmented Generation (RAG) bot that answers questions from users' documents.
- Retrieved relevant document sections for each question and used them as context for grounded answers.
- Implemented the Q&A flow so users get context-based answers without manual searching.

Spam Email Classifier

Tech Stack: Python, Pandas, NumPy, Scikit-learn, NLTK, Jupyter Notebook / Streamlit

- Developed a machine learning classifier that labels email messages as spam or legitimate.
- Trained the model to learn patterns in email text that separate spam from legitimate messages.
- Used the trained model to classify new emails, helping filter unwanted messages automatically.
